

# MARINA SYSTEMS

When it comes to design and installation of pontoon structures – Milford Marina Systems rise to the top

**ANYONE WITH A** requirement for a floating structure such as a Marina, Ferry Terminal, Waterbus Stop, Breakwater or even a Floating Building, would do a lot worse than to contact Milford Marina Systems.

Having cut their teeth on the wild Atlantic coasts and wide misty lakes of Ireland, Milford Marina Systems are building structures to survive some of the harshest conditions. Whilst the waters on the coasts and broad lakes of Ireland are normally tranquil and placid, notoriously they can turn nasty, leaving a challenge to the designer of floating structures.

An Irish company, Milford Marina Systems, has addressed these problems and is putting floating structures into places that hitherto were thought unsuitable locations in which light pontoons would not survive.

According to Milford Marina's Rod Calder-Potts using heavy, Floating Concrete Pontoons in carefully chosen sites using carefully designed

Mega-Yacht Harbour

and installed anchoring systems is the answer, clients see the sense of paying a little extra for systems that are designed to last in excess of fifty years with very low maintenance.

Floating breakwaters are cost effective, good looking and have the advantage of being usable as moorings.

RIGHT: **Typical Floating Breakwater**

Milford Marina Systems design, build and install long life, low maintenance yacht harbours using state-of-the-art anchoring systems that are discreet, clean, quiet, comfortable and unobtrusive.

Milford is keen to keep close to the client from the design stage to completion.

Milford Marina Systems are based in Cuffesgrange, Co. Kilkenny, Ireland, and can be contacted at 00353(0)56-7729918 or [highbank@eircom.net](mailto:highbank@eircom.net) or visit stand N1736. 🌞
