

Our pontoons are designed to satisfy the most extreme demands.

Believe us, we've seen it all. For over 20 years, SF Marina has designed, built and installed Pontoon systems and Breakwaters throughout the world; from Scandinavia's barren coastlines to the elongated beaches of Mexico. Snowstorms, floods and hurricanes; the strict laws of nature have forced us to develop floating structures which will endure the most demanding circumstances.

Today we can offer a complete product range including Floating Concrete Breakwaters and Docks, Pontoons for Marinas and commercial use, supplemented by Fingers, Utility Pedestals and the necessary ancillary equipment. We are currently represented in 30 countries, which makes us one of the leading Pontoon and Breakwater Manufacturers in the world.

We promise we can always find a solution to satisfy your demands – no matter where you are or what kind of special needs you have.
